

The Miracle Piano and Midi

If you are experiencing problems using the Miracle Piano with your midi program, follow these steps:

- 1)**Check your midi connections**(make sure midi out of the piano is connected to midi in of the interface, and midi out of the interface is connected to midi in of the piano).
- 2)**Make sure the serial(Miracle) cable is not connected to the Miracle Piano.** Do not connect the serial(Miracle) cable from the Miracle Piano to the midi interface. Once the cable is disconnected, restart the Miracle Piano(turn off and on). The piano must be restarted after removing the cable or communication will not exist.
- 3)**Check the midi setup in the midi program you are using.** Make sure that the port you are using is the one that is selected.
